

EXTEND YOUR INFORMATION SECURITY REACH TO REMOVABLE MEDIA AND MOBILE DEVICES

**LyncRMS Discover & Audit – PDA & Smartphone provides organizations with a comprehensive solution to track the use of PDA and Smartphone devices.**

With growing compliance regulations, you need to know what devices are connecting to your network, and more importantly what information is leaking from your organization on these devices. In the first 6 months of 2004, 63,135 mobile phones and 5,838 PDAs were left in London cabs, with the introduction of privacy breach legislation in many United States jurisdictions, the potential for significant financial consequences of a lost PDA is enormous.

While PDA and Smartphones can be managed with the use of server based synchronization products, most devices are privately owned and connect and synchronize directly with the PC, without any knowledge of IT management or information security officers. Lync RMS enables you to track and control all devices connecting to your networked PCs.

Expand your network security reach to PDA & Smartphones:

- ➊ Discover all PDA & Smartphones connecting to the network
- ➋ Audit all hardware details of devices connecting

HOW IT WORKS
